Assessment Details

Assessment title	Abr.	Weighting
“EcoSprout” plant nursery	WRIT1	70%
Pass marks are 40% for undergraduate work and 50% for postgraduate work unless stated otherwise.		

Task/assessment brief:

Read the following scenario to develop dynamic web application system for given organization and write a report covering the given tasks. The web system documentation also needs to be included according to the given content within the report.

Note that the students would be assessed for the originality effectiveness and quality of the application development

Students can add more functionality with the clearly mentioned assumptions.

Plant nursery management is a specialized sector that encompasses the cultivation, sale, and care of plants while providing expert gardening services to both individual consumers and commercial clients. It involves managing diverse plant inventories, coordinating gardening and landscaping services, educating customers about plant care, handling complex customer inquiries, and ensuring optimal plant health throughout the supply chain. Effective nursery management enhances customer satisfaction, promotes sustainable gardening practices, increases business profitability, and fosters community engagement with nature while ensuring efficient operational workflows and inventory control.

“EcoSprout” Nursery is a newly established plant nursery and gardening services company strategically located in Kegalle, Sri Lanka. Recognizing the growing demand for quality plants, professional landscaping services, and gardening education in the region, the management of **“EcoSprout”** has decided to launch an interactive web-based platform to provide customers with a seamless and comprehensive experience in discovering, purchasing, and caring for plants while accessing professional gardening services. The platform is designed to showcase the company's complete profile, extensive plant catalogue (including indoor plants, outdoor plants, ornamental varieties, and edible species with detailed descriptions, care requirements, and pricing), gardening tools and accessories, comprehensive landscaping services, seasonal plant care workshops, and educational resources including blog posts about plant care tips, DIY gardening projects, and seasonal gardening guides.

Customers should be able to register on the platform, browse through the extensive plant catalogue, purchase plants, make secure payments, register for educational workshops and events and submit detailed queries regarding plant care. Nursery staff members should be able to update plant inventory, add new plant varieties with comprehensive details including botanical information and care instructions, updating gardening services, update workshop schedules and manage participant registrations and respond to customer inquiries. Administrators should be able to managed staff accounts with role-based access, oversee the complete booking and order processing, generate detailed sales reports and ensure secure handling of user data

There are three main types of users in the system:

- **Customers/plant Enthusiasts** – to browse, register, purchase and manage professional services.
- **Nursery Staff** – to manage inventories, order processing, and service coordination.
- **Administrators** – to oversee the system, manage operations, and ensure data security.

The website should full fill bellow mentioned requirements.

- Backend functionality (database)
- Online registrations for the plant services
- User authentication process, such as creating the user accounts and logging in to the accounts.
- Search for details of plants.
- Submit the queries to the plant nursery management administration.
- Using proper error-handling methods
- Students can add more functionality with the clearly mentioned assumptions.

Tasks

Task 01: Plan and design web application for a given scenario – **L01**

a. Analysing similar web systems will be very important to plan new site Find web sites that share a similar audience and compare them considering design factors and other relevant features. (Marks 20)

b. Provide proper UI design (mock-up diagrams) and site map including all the design decision justifications. (Marks 20)

Task 02:

a. Implementation of attractive user-friendly interfaces using appropriate technologies. - **L02** (Marks 20)

b. Implementation of back end functionalities -**L 03, L04**(Marks 20).

Task 03: Test your web site by using appropriate techniques. Include (testing overview, test plan, test cases, feedback evaluation)- **L 05** (Marks 20)

Word count (or equivalent):

2800 Words

This is a reflection of the effort required for the assessment. Word counts will normally include any text, tables, calculations, figures, subtitles and citations. Reference lists and contents of appendices are excluded from the word count. Contents of appendices are not usually considered when determining your final assessment grade.

Academic or technical terms explained:

Requirements analysis – identifying functional and non-functional requirements

System design – defining architecture, data models, and UI/UX structure

Front-end development – implementing client-side components using technologies such as HTML, CSS, JavaScript, and frameworks (e.g., Bootstrap)

Back-end development – developing server-side logic using languages and frameworks such as PHP

Database design and implementation – creating relational or NoSQL databases and managing data persistence

Integration – connecting front-end, back-end

Testing and debugging – validating functionality, performance, and security

Submission Details

Submission Deadline:	This will be provided on the Moodle submission point.	Estimated Feedback Return Date	This will normally be 20 working days after initial submission.
Submission Time:	By 2.00pm on the deadline day.		
Moodle/Turnitin:	Any assessments submitted after the deadline will not be marked and will be recorded as a non-attempt unless you have had an extension request agreed or have approved mitigating circumstances. See the School Moodle pages for more information on extensions and mitigating circumstances.		

File Format:	The assessment must be submitted as a pdf document (save the document as a pdf in your software) and submit through the Turnitin submission point in Moodle.
	Your assessment should be titled with your: student ID number, module code and assessment ID, e.g. st12345678 CSE5009 WRIT1
Feedback	Feedback for the assessment will be provided electronically via Moodle. Feedback will be provided with comments on your strengths and the areas which you can improve. View the guidance on how to access your feedback. All marks are provisional and are subject to quality assurance processes and confirmation at the programme Examination Board.

Assessment Criteria

Learning outcomes assessed

LO1-Design web applications for organizational needs
LO2-Develop responsive client-side interfaces using appropriate front-end technologies.
LO3-Implement robust server-side functionality to support web application logic and integration.
LO4-Integrate web applications with databases to manage dynamic data effectively.
LO5-Test Web applications using systematic testing methodologies

Other skills/attributes developed

This includes elements of the Cardiff Met EDGE (Ethical, Digital, Global and Entrepreneurial skills) and other attributes developed in students through the completion of the module and assessment. These will also be highlighted in the module guidance, which should be read by all students completing the module. Assessments are not just a way of auditing student knowledge. They are a process which provides additional learning and development through the preparation for and completion of the assessment.

Marking/Assessment Criteria

Task	Poor <40	Satisfactory 40-54	Good 55-69	Excellent 70-100
Plan and Design website, Similar system Comparison. (Task 01-a)	Demonstrate poor web site comparison or none. No format or criteria maintained in the answer.	Compare minimum two web sites without proper format. Criteria are given but not relevant.	Provides comparison of two or more similar web site with the use of proper criteria with clear format. Indicate the web comparison by considering all the relevant design aspect of the given scenario.	Provides an excellent level of detailed web site comparison with valid arguments regarding the similar web applications and appropriate criteria are available. Maintains critical evaluation of web site features and design aspects
Plan and design website, user interface design (Task 01-b)	No evidences attached. Provides poor or incomplete wireframe diagrams.	Provides basic user interface designs and wireframe diagrams	Provides proper use of wire framing diagrams by covering most of the system aspects. Provides suggestions for appropriate colours and themes within the diagrams.	Provides very clear and detailed design by considering the appropriate colours and themes. Maintains detailed user interface designs, sitemaps and wire-frame diagrams clearly.
System implementation and demonstration, front-end development (Task 02-a)	Maintains Poor use of an elements and attributes, tags, Cluttered pages poor use of colours and inappropriate use of images and fonts, No or very poor navigation between pages, No or poor consistency throughout web site, No or poor use of Selectors properties and values. Provides	Maintains satisfactory use of an elements and attributes, tags, Satisfactory use of colours themes and layouts and images and fonts, Navigation between pages with few broken links, Satisfactory use consistency throughout web site. Uses few selectors. different technologies have been used but not appropriate.	Maintains good attractive web design with appropriate use of colours, themes, images, fonts and layouts. Provides good easy navigations between the pages with quick information findings. Maintains appropriate use of styling techniques and other	Provides eye catching design with innovative ideas. Maintains strategic use of white spaces, well balanced appropriate colours, well planned information structure. Excellent use of technologies to make the website fast loading and demonstrating excellent knowledge of underlying concepts.

	No evidence of using different technologies, No or poor concepts understanding	Maintains satisfactory level of concepts understanding	technologies. Provides good level of concepts understanding	
System implementation and demonstration, back-end development (Task 02-b)	Maintains no proper standard coding, naming conventions, no comments in the code. Poor code reusability or run, poor implementation of core (implementation of one function or none). Providing system with syntax or logical errors, poor understanding of underlying concepts and poor understanding of how system works. Demonstration is not done and no database handling.	Provides error free functional website with standard coding. Maintains satisfactory level of understanding of the basic concepts and used techniques. Demonstrate the system without proper preparation and maintained basic data handling transactions. Provides basic error handling and explanations of code work but not exceptional.	Provides well-designed error free fully functional interactive system with proper database handling transactions. Maintained well prepared system demonstration with good communication skills. Provides error handling. Well prepared system demonstration with good understanding of underlying concepts. Maintains ability to pinpoint code segments and its functions.	Maintains implementation of well functioning, error free system using innovative ideas with valid arguments. Demonstrating an excellent understanding of the technical concepts and ability to explain code segments well. Maintains ability to justify selected techniques by starting how it has applied in a specific problem.
System testing and evaluation Task 03	No proper techniques are selected and no proper format to document the testing. Maintains lack of evidence for the testing and not evidence for user acceptance testing	Selecting testing technique minimum one and provides basic level of test plan with few test cases and test results attached with the document. Provides evidence of acceptance testing and basic user feedback evaluation report.	Maintains appropriate testing techniques, proper test plan and possible test cases. Includes screenshots and other evidence for the test results. Provides user manual covering all the aspects of the system and standard format. Maintains evidence of acceptance	Provides evidence of critical analysis of the test results and conclusions. Demonstrates an excellent level of acceptance testing evidence, critical analysis of user feedbacks. Provides discussions and lessons learned

			testing and good level of user feedback evaluation.	

Further Information

Staff note – Please check that these are aligned with your programme's expectations.

Who can answer questions about my assessment?

Questions about the assessment should be directed to the staff member who has set the task/assessment brief. This will usually be the Module Leader. They will be happy to answer any queries you have.

Staff members can often provide feedback on an assignment plan but cannot review any drafts of your work prior to submission. The only exception to this rule is for Dissertation Supervisors to provide feedback on a draft of your dissertation.

Referencing and independent learning

Please ensure you reference a range of credible sources, with due attention to the academic literature in the area. The time spent on research and reading from good quality sources will be reflected in the quality of your submitted work.

Remember that what you get out of university depends on what you put in. Your teaching sessions typically represent between 10% and 30% of the time you are expected to study for your degree. A 20-credit module represents 200 hours of study time. The rest of your time should be taken up by self-directed study.

Unless stated otherwise you must use the **HARVARD** referencing system. Further guidance on referencing can be found in the Study Smart area on Moodle and at www.citethemrightonline.com (use your university login details to access the site). Correct referencing is an easy way to improve your marks and essential in achieving higher grades on most assessments.

Technical submission problems

It is strongly advised that you submit your work at least 24 hours before the deadline to allow time to resolve any last minute problems you might have. If you are having issues with IT or Turnitin you should contact the IT Helpdesk on (+44) 2920 417000. You may require evidence of the Helpdesk call if you are trying to demonstrate that a fault with Moodle or Turnitin was the cause of a late submission.

Extensions and mitigating circumstances

Short extensions on assessment deadlines can be requested in specific circumstances. If you are encountering particular hardship which has been affecting your studies, then you may be able to apply for mitigating circumstances. This can give the teachers on your programme more scope to adapt the assessment requirements to support your needs. Extensions and mitigating circumstances policies and procedures are regularly updated. You should refer to your degree programme or school Moodle pages for information on extensions and mitigating circumstances.

Unfair academic practice

Cardiff Met takes issues of unfair practice **extremely seriously**. The University has procedures and penalties for dealing with unfair academic practice. These are explained in full in the University's Unfair Practice regulations and procedures under Volume 1, Section 8 of the Academic Handbook. The Module Leader reserves the right to interview students regarding

any aspect of their work submitted for assessment.

Types of Unfair Practice, include:

Plagiarism, which can be defined as using without acknowledgement another person's words or ideas and submitting them for assessment as though it were one's own work, for instance by copying, translating from one language to another or unacknowledged paraphrasing.

Further examples include:

- Use of any quotation(s) from the published or unpublished work of other persons, whether published in textbooks, articles, the Web, or in any other format, where quotations have not been clearly identified as such by being placed in quotation marks and acknowledged.
- Use of another person's words or ideas that have been slightly changed or paraphrased to make it look different from the original.
- Summarising another person's ideas, judgments, diagrams, figures, or computer programmes without reference to that person in the text and the source in a bibliography/reference list.
- Use of assessment writing services, essay banks and/or any other similar agencies (NB. Students are commonly being blackmailed after using essay mills).
- Use of unacknowledged material downloaded from the Internet.
- Re-use of one's own material except as authorised by your degree programme.

Collusion, which can be defined as when work that has been undertaken with others is submitted and passed off as solely the work of one person. Modules will clearly identify where joint preparation and joint submission are permitted, in all other cases they are not.

Fabrication of data, making false claims to have carried out experiments, observations, interviews or other forms of data collection and analysis, or acting dishonestly in any other way.

How is my work graded?

Assessment grading is subject to thorough quality control processes. You can view a summary of these processes on the [Assessment Explained Infographic](#).

Grading of work at each level of Cardiff Met degree courses is benchmarked against a set of general requirements set out in [Volume 1, Section 4.3](#) of our Academic Handbook. A simplified version of these Grade Band Descriptors (GBDs) with short videos explaining some of the academic terminology used can be accessed via the [Facilitation of Learning](#) resource page.

We would strongly recommend looking at the [Study Smart](#) area of Moodle to find out more about assessments and key academic skills which can have a significant impact on your grades. Always check your work thoroughly before submission.
